

AstraMakers Capability Statement

Infrastructure, Software & Automation Engineering

OVERVIEW

AstraMakers is an engineering consultancy based in Mumbai, India. We design and deliver production infrastructure, software platforms, monitoring, automation, and embedded systems for environments that must stay operable after handover.

Engagements are scoped against constraints â not vendor preference. Documentation, verification, and day-two ownership are part of delivery, not optional extras.

WHAT WE DELIVER

Work typically spans datacenter and server-room engineering, network architecture, monitoring platforms, operational automation, production software, and edge or embedded systems.

- Infrastructure engineering â planning, power, networking, security controls, monitoring, and operational handover
- Software engineering â operable internal and client-facing platforms with clear ownership after go-live
- Automation â reduce repetitive operational work without hiding failure modes
- Embedded and edge systems â devices and local services designed for field install and recovery
- Product engineering â product-shaped systems with maintainable architecture and operator paths
- Consulting â sequenced plans, readiness reviews, and vendor-neutral recommendations

HOW ENGAGEMENTS RUN

Discovery confirms fit, risks, and a practical approach within one to two business days of a clear brief. Architecture defines solution shape before build expands.

Implementation includes verification and security controls. Knowledge transfer hands over as-builts, runbooks, and decision context. Operational support, when scoped, continues through day-two review.

DELIVERY STANDARD

Production-first engineering, vendor-neutral recommendations, documentation included, automation where it matters, security considered early, and systems structured for

PUBLISHED EVIDENCE

Engineering case studies are published at astramakers.com/work. Each case study documents architecture, constraints, and delivery detail for operators and decision-makers.
