

AstraMakers Services Overview

Engineering services for production environments

OVERVIEW

AstraMakers engineering services for production environments. Each service is scoped for operable delivery with documentation and handover. Full detail:

<https://astramakers.com/services>

INFRASTRUCTURE ENGINEERING

Datacenter and server-room delivery spanning planning, power, networking, security controls, monitoring, documentation, and operational handover.

SOFTWARE ENGINEERING

Production software platforms designed for operators â clear ownership, maintainable architecture, and handover that survives staffing changes.

AUTOMATION

Operational automation that reduces repetitive work without hiding failure modes â scripts, schedules, and workflows operators can extend.

EMBEDDED SYSTEMS

Edge and embedded platforms for real sites: installable, recoverable, and documented for field and operations teams.

PRODUCT ENGINEERING

Product-shaped systems with architecture notes, operator paths, and documentation that changes with the product.

CONSULTING

Vendor-neutral planning, readiness reviews, and sequenced recommendations before procurement or build expands
